SOFTWARE ENGINEER | REACT | JAVASCRIPT | C#/.NET | SQL | AI-ASSISTED DEVELOPMENT

SUMMARY

Software developer with experience building full-stack web applications, REST APIs, database-backed workflows, and automation tools using React, JavaScript, Node.js, C#/.NET, SQL, and Python. Background includes more than 10 years of industrial troubleshooting and systems support, with strong experience diagnosing complex technical issues, documenting work, and collaborating across teams. Uses AI development tools deliberately for feature planning, code review, debugging, edge-case discovery, test ideas, and documentation while manually validating behavior and code quality. Interested in end-to-end ownership, learning new stacks quickly, and contributing to software that supports real users.

TECHNICAL SKILLS

- **Languages & Frameworks:** JavaScript, React, Node.js, Express.js, C#, .NET, ASP.NET MVC, Entity Framework Core, Python, SQL, HTML, CSS
- **Web & APIs:** REST API development, frontend/backend integration, session authentication, protected routes, JSON, async data flows
- **Databases & Data:** SQLite, SQL Server, relational data modeling, structured data processing, database-backed applications
- **Tools & Platforms:** Git/GitHub, Visual Studio, VS Code, Swagger, ClosedXML, HTML Agility Pack, Google Drive API
- **AI-Assisted Workflow:** ChatGPT, Claude/Codex-assisted feature planning, code review, debugging, test scenario generation, and documentation
- **Technical Strengths:** Troubleshooting, debugging, documentation, workflow analysis, remote communication, cross-functional collaboration

PROJECTS

TaskForge - Full-Stack Kanban Board Application | React, JavaScript, Node.js, Express.js, SQLite

- Built a full-stack Kanban-style task management application with user registration, login, protected dashboard routes, task CRUD, and status-based task columns.
- Developed a component-based React frontend with forms, task cards, dashboard navigation, and API-connected user workflows.
- Created REST API endpoints with Node.js and Express, using SQLite and prepared statements to persist users and tasks.
- Implemented session-based authentication using express-session and bcrypt, and debugged CORS, credentialed requests, async data handling, and frontend/backend data flow.

InventoryManager - Inventory & Order Management Dashboard | React, C#, ASP.NET Core Web API, EF Core, SQL Server

- Built a full-stack inventory operations dashboard with product inventory CRUD, product tables, order placement, and order history workflows.
- Created ASP.NET Core Web API endpoints for inventory operations and order logic, including validation for product availability and inventory quantity updates when orders are placed.
- Built React components for product forms, order forms, delete workflows, navigation, and state-driven UI refresh after API/database changes.
- Used Entity Framework Core models, DbContext, migrations, SQL Server configuration, Swagger, and async API calls to connect the UI, backend, and database layers.

Real Estate Listing Aggregation Application | C#, ASP.NET MVC, Entity Framework Core, SQLite

- Created an ASP.NET MVC application that scraped, stored, filtered, and displayed property listing data for central Kentucky counties.
- Used HttpClient, HtmlAgilityPack, Entity Framework Core, Razor views, and SQL-backed filtering to collect and organize listing data.
- Troubleshot blocked requests, malformed HTML, parsing failures, and search/filtering edge cases during iterative development.

Time Sheet Filter Application | C#, WinForms, ClosedXML

- Built a C# Windows Forms tool that imports Excel timesheet reports, applies business rule filters, displays results in a grid, and exports formatted Excel output.
- Translated operational audit rules into code to identify long lunches, extended breaks, readiness events, and other compliance-related patterns.

PROFESSIONAL EXPERIENCE

Developer - Contract | Safety Net Alliance of Northern Kentucky, Louisville, KY | Apr 2025 - Oct 2025

- Added embedded Google Drive folder integration to improve document upload, organization, and content access workflows.
- Updated and maintained website features based on client requirements while balancing usability, maintainability, and user workflow needs.
- Communicated technical updates clearly with non-technical stakeholders and supported practical workflow improvements in a remote contract setting.

Automated Equipment Technician, E&I Technician / Site Laser Safety Officer | The JM Smucker Co., Lexington, KY | Oct 2010 - Jun 2025

- Led an in-house DeviceNet-to-Ethernet conversion project, saving over \$100,000 while coordinating implementation and troubleshooting.
- Installed, maintained, and diagnosed instrumentation, controls, motors, drives, sensors, and production support systems in a high-availability environment.
- Provided technical troubleshooting, operational support and clear documentation for complex production systems.
- Mentored and trained new hires in troubleshooting methodology, technical systems and automated equipment operation.

Field & Lab Technician | University of Kentucky - Program for Archaeological Research, Lexington, KY | Sept 2009 - Oct 2010

- Analyzed, cataloged, and documented archaeological artifacts while contributing to technical reports and field/lab workflows.

EDUCATION

Cybersecurity - CODE:YOU, Louisville, KY | Completed: Mar 2026

Software Development / Web Development - CODE:YOU, Louisville, KY | Completed: Mar 2024 & Aug 2025

Bachelor of Arts in Anthropology (Minor: Linguistics) - University of Kentucky, Lexington, KY | Completed: May 2010
